DIZZ

Design, development, branding and video

We create projects that increase profit.

DIZZ

Dizz Agency is a full-cycle digital agency

We are a full-service design agency that has been creating world-class digital products, design, video and branding for **10 years**. We are a **team of experienced and talented designers** who solve problems, who believe that great design is created when strategy and creativity work together.

Work With the Whole World

Where are our customers from?

USA, Canada, Germany, England, Spain, Italy, Poland, Lithuania, Switzerland, Holland, Cyprus, Ukraine and other countries

10

Experience of our specialists 10 years

10

10 years in business

600

More than 600 of finished works

170

170 successful and happy customers

The idea

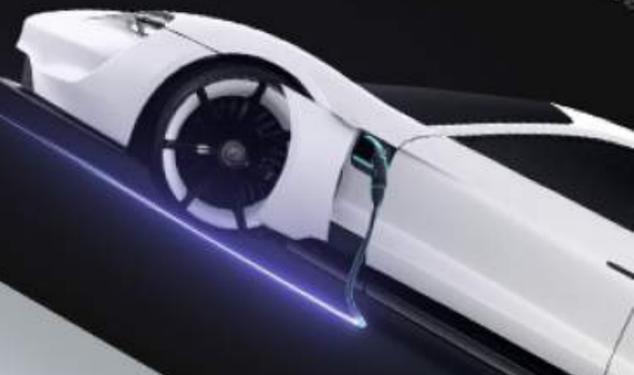

The Porsche of tomorrow
A sports car, naturally.

What do we at Porsche think of when we look at tomorrow's sports car, naturally. Our Mission E sports Car. But we also look for sustainability, mobility, and consider mind for disruption and education. Because in the future we think cars will have their own lives... in your pocket. Keeping our advantages from the new road to the road. We know. Daily Mission E we take our next step towards the future. We know. We know. It doesn't stop. It continues to surprise in hybrid, all electric drive systems can help meet our standards of high performance.

Learn the dedication is shared in our other pillars: the Porsche Performance. Our Concept Daily Mission E is all over on this but I include the complete view of all electric drive. For scheduled work for days, two luggage compartments, 230cm drive E Performance. Porsche also integrated the luxurious overall concept.

Conventional charging

The average range of 350 km (217 miles) would be reduced to about 100 km (62 miles) if you used a standard 110V household outlet. Charging with 220V or DC charging will considerably reduce the time used - 80% of the maximum charge level in less than 15 minutes. After 80% of the maximum charge level, the range increases by about 100 km (62 miles).

DIZZ

The image is a promotional graphic for the Porsche Taycan Mission E. It features a white sports car shown from a rear three-quarter view, centered on a dark purple background. Two bright blue beams of light converge on the car from the top corners, and two red beams converge from the bottom corners. The car is surrounded by faint red concentric circles on the ground. The Porsche logo and name are in the top left. The word 'Taycan' is written in a large, white, cursive font in the center, with 'Porsche Mission E - Tribute Tomorrow' in a smaller, white, sans-serif font below it. Two callouts labeled 'Wheel Advantage' with a plus sign icon point to the rear and front wheels. At the bottom, three performance metrics are listed: '> 250 km/h' (Top speed > 250 km/h (155 mph)), '> 500 km' (Range > 500 km (300 Miles)), and '< 3.5 sec' (Acceleration 0-100 km/h < 3.5 sec). A small inset image of a tunnel interior is in the bottom right. A vertical text 'Scroll down' is on the left side.

Conventional charging.

The system voltage: 800V. Uncommon. 400V would be common. But what's common about a Porsche? With Porsche Turbo Charging, charging with 800V at DC charging stations is considerably faster than usual – 80% of the maximum charge level in less than 15 minutes. In other words: in approximately 4 minutes charging time the range increases by about 100 km (60 Miles).

But the battery can also be charged at a conventional public charging station or at home, by charging cable via the charging port hidden at the side of the front fender.

The idea

The Porsche of tomorrow?
A sports car, naturally.

What do we at Porsche think of when we look to tomorrow? Sports cars, naturally. Our Mission Future Sports Car. But we also look for sustainable mobility, and consider needs for digitisation and urbanisation. Because in the future our sports cars will tackle these routes too – in pole position – bringing new technologies from the race track to the road. With Concept Study Mission E we take our next step towards the future. With an all-electric sports car that defines our vision of e-mobility. The time is ripe for this study. It shows that, in addition to our plug-in hybrids, all-electric drive systems can fully meet our... (unreadable)

To the main page

DIZZ

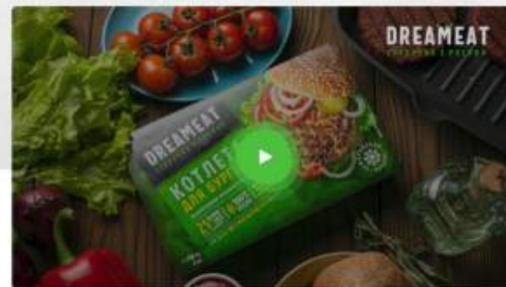

The screenshot displays the DREAMEAT website interface on a tablet. The top navigation bar includes links for Products, Recipes, About us, Questions & Reviews, Media about us, and Contacts. Social media icons for Facebook and Instagram are present, along with a language selector set to 'ENG' and a 'Where to buy?' button. The main content area features the headline 'CHANGE THE WORLD FOR THE BEST!' in green and black text. Below this, a sub-headline reads 'Gentle cutlet for burger. Balanced amino acid composition'. A central image shows a package of 'DREAMEAT CUTLET FOR BURGER TENDER' with a picture of a burger. To the left of the package, nutritional information is listed: '22.9g OF PROTEIN PER 100g DRY WEIGHT', '100% VEGAN', and 'CONTAINS OMEGA 9'. An 'Order' button is shown with a price of '120 SEK / 100g'. At the bottom, there is a carousel of product images and a 'MEDIA ABOUT US' link.

The five-year interdisciplinary programme of research will use modern mathematical methods from probability theory, advanced Monte Carlo methods and inverse problems to develop novel approaches to the theory and application of radiation transport. We will pursue an innovative exploration of foundational, translational and application-driven research, developing predictive models with quantitative accuracy and software prototypes, ready for real-world implementation in the energy, health care and space exploration nuclear industries. This programme will take complementary research groups from mathematics, engineering and medical physics, leading to sustained clinical trials in academic knowledge and expertise. Through a diverse team of positions and researchers, we will lead advances in radiation modelling that are disruptive to the current paradigm, ensuring that the UK is at the forefront of the 21st century nuclear industry.

Application Areas

Energy

New medical treatments such as proton beam therapy are addressing the need for treatments of difficult cancers while minimising the damage to surrounding tissues.

More info

Radiotherapy

New medical treatments such as proton beam therapy are addressing the need for treatments of difficult cancers while minimising the damage to surrounding tissues.

More info

Healthcare in space

The UK space industry is undergoing rapid expansion and needs developments e.g. for building of satellites and constellations, power sources for autonomous buses and nuclear-powered space exploration.

Work and study with us:

You will see us develop a hub of research leadership in the UK that will span the energy, space and healthcare sectors. It will initially be home to around 10 researchers and more that this is just the beginning of our growth.

Andreas Kyprianou

Completing his undergraduate studies in Mathematics at the University of Oxford and PhD in Probability Theory at the University of Warwick (1999), Andreas spent the early part of his career working at the Shell International Exploration and Production R&D laboratories in The Hague. Before joining the University of Bath in 2006, he also held academic positions at the London School of Economics, Edinburgh University, Utrecht University and Maastricht University. He has held visiting professorships at ETH Zurich, Universitat Politècnica de Catalunya and the CONACYT Centro de Investigación en Matemáticas in Mexico.

Andreas is an specialist in probability theory and is the founder of the Probability Fellowship at Bath (2010-2013), former of the University's Department of Mathematical Sciences, serving as its Director from 2007-2019. Since 2014, he has been Director and PI of the multi-million-pound EPSRC Centre for Doctoral Training in Statistical Applied Mathematics at Bath (SAMBA). In 2020, he became Director of the Institute for Mathematical Sciences. Andreas is the PI of the MaThRad EPSRC programme grant.
